15.) Please list three aspects of this course that you would like to see improved? Offer specific suggestions if you can.

[Hours per week for this course: 1-3] Equipment

[Hours per week for this course: 7-9] machines are too old that's it

[Hours per week for this course: 4-6] A standard grading format for TA's to follow. Example, on one lab report there would be a comment that a brief description of the procedure should have been mentioned in the executive summary. The next lab report this would be done only to have a different TA grading it to comment, the procedure used isn't necessary.

[Hours per week for this course: 4-6] more of a concise grading scale students can follow

[Hours per week for this course: 7-9] 1) Standardized Grading 2) Give students access to powerpoints discussing Experimental Challenges to avoid the pitfalls during the lab 3) Suggestions on how the students can prepare for the lab during the pre-lab period if possible (such as making the Carbopol solution beforehand, calibration, etc.)

[Hours per week for this course: 15-20] Calibrations and check if equipment is working

[Hours per week for this course: 4-6] The equipment in the lab is old and could be replaced. Our labs weren't graded by all the TAs meaning if they aren't grading to the same standard, some groups can have a lower grade in comparison to others. An explanation of how our reports should look would be nice, I had never been told to put labels for tables above and figures below until this lab. We have only taken chemistry labs and the expectations are slightly different.

[Hours per week for this course: 7-9] Lab manuals should be proofread, some of the instruments should be recalibrated, and the rubrics for labs should be more detailed.

[Hours per week for this course: 4-6] fix the lab manuals they do not really have good enough procedure make the lab presentations more of a lab demo instead of theory and slides

[Hours per week for this course: 10-12] Some of the equipment was not working well or needed to be upgraded.

[Hours per week for this course: 13-15] The lab manuals were unclear sometimes and contained slight mistakes.

[Hours per week for this course: 10-12] Upgrade the equipment to a newer model for easy use Replace pipes because of leakage due to wear and tear

[Hours per week for this course: 13-15] N/A

[Hours per week for this course: 15-20] for TAs and professors to more closely monitor if whole team is doing work, keep comments on lab reports and points taken off consistent, better examples of lab reports.

[Hours per week for this course: 10-12] 1) The graded papers should be scaled according to the grades of the class as different teacher's assistants provide very different scores. 2) The papers should just be uploaded to the blackboard for convenience. 3) Online grades should be updated on a weekly basis.

[Hours per week for this course: 13-15] N/A

[Hours per week for this course: 13-15] N/A

[Hours per week for this course: 10-12] Nothing.

[Hours per week for this course: 10-12] Nothing.

[Hours per week for this course: 10-12] Nothing.

[Hours per week for this course: 1-3] It would be helpful to have more instruction in regards to the use of the equipment. Often the hardest part was knowing how to set up the apparatus. Having additional reference materials for each lab would be helpful. This would provide more context. The lab manuals could also be updated. Many of the objectives and calculations were not very clear or easy to follow.

[Hours per week for this course: 10-12] Need better equipment

[Hours per week for this course: 10-12] None

[Hours per week for this course: 7-9] Some lab equipment was old and faulty, TAs gave wrong information sometimes, lab instructions sometime unclear.

[Hours per week for this course: 7-9] A little more clarity on what relationships should be shown on final reports would be nice. Like a concise list of "Show: A vs B, C vs B"

[Hours per week for this course: 10-12] It would really be helpful if TA's knew how to perform the labs before semester started especially to help on the first lab when we don't have another group to present. The first lab was the most difficult one. Also, some labs need better explanation of the procedure, some of them where very vague.
