15) If you are taking CHE 341, was the process control lab experiment useful to the course? Please add any other comments.

[Hours per week for this course: 7-9] Yes, very nice experiment with real life control system!

[Hours per week for this course: 10-12] Yes. Helped understand application

[Hours per week for this course: 15-20] NA

[Hours per week for this course: 13-15] N/A

[Hours per week for this course: 4-6] it was more practice with lab work

[Hours per week for this course: 10-12] N/A

[Hours per week for this course: 10-12] N/A

[Hours per week for this course: 4-6] N/A

[Hours per week for this course: 7-9] NA

[Hours per week for this course: 13-15] not really.

[Hours per week for this course: 4-6] n/a

[Hours per week for this course: 10-12] yes. I liked addition of the experiment as it actually shown the real applications of what we learned in CHE 341

17.) Please list three aspects of this course that you would like to see improved? Offer specific suggestions if you can.

[Hours per week for this course: 10-12] peer to peer presentation, too informal

[Hours per week for this course: 7-9] new equipment for some of the experiments can be useful, for example CSTR reactor.

[Hours per week for this course: 4-6] The equipment, resources and quality of resources

[Hours per week for this course: 7-9] labs are too basic, lab equipment is very old, available TA for help

[Hours per week for this course: 10-12] New equipment or equipment that works well.

[Hours per week for this course: 10-12] 1) Lab manuals need to be edited 2) Some equipment needs to be replaced 3) Hand back labs, pre-labs, presentations in a more timely fashion

[Hours per week for this course: 10-12] machines are a little old/problematic.

[Hours per week for this course: 13-15] N/a

[Hours per week for this course: 7-9] Upgrading of lab manuals and lab equipment

[Hours per week for this course: 15-20] Lab Manual

[Hours per week for this course: 13-15] The time commitment is disproportionate to the grades we received.

[Hours per week for this course: 4-6] some of the bench tests were in ill repair. more funding should be applied to the unit ops lab

[Hours per week for this course: 10-12] N/A

[Hours per week for this course: 10-12] N/A

[Hours per week for this course: 4-6] - Use equipment that is new enough that it doesn't say 'Property of U of I Circle Campus' on it - Re-write the

lab manuals - Start digitizing the lab experiments more

[Hours per week for this course: 7-9] Equipment in lab is old and does not always run properly, especially distillation, heat transfer, humidity. Sharing air for humidity and fluid flow was not ideal.

[Hours per week for this course: 7-9] updated equipment better written lab manuals

[Hours per week for this course: 4-6] equipment, planning with senior design course to not overlap with due dates

[Hours per week for this course: 4-6] working in groups

[Hours per week for this course: 4-6] n/a

[Hours per week for this course: 4-6] better/newer/repared equipment

[Hours per week for this course: 4-6] More refined lab manuals and procedures.

[Hours per week for this course: 10-12] time limit

[Hours per week for this course: 10-12] 1. Lab manuals need updating and revision 2. Lab manuals need updating and revision 3. Lab manuals need updating and revision

[Hours per week for this course: 7-9] 1. Lab manual revisions 2. Lab manual revisions 3. Lab manual revisions

[Hours per week for this course: 10-12] Updated equipment More resources for understanding procedure Additional industrial materials can't hurt (i.e. beyond the scope of the course)

[Hours per week for this course: 1-3] I would like a section covering compressors. I would also like some specific lecturing on the machines involved in the processes, such as the pumps. That's about it.
