

CHE 311 Fall 2019 Self-Study Report

Instructor: Ying Liu

Course Comments / Plans

The students indicate that the following subjects have high usage, relevance and/or applicability with the course: (i) calculus and vector calculus, (ii) differential equations, (iii) application of engineering principles to solve engineering problems, and (iv) formulation of engineering problems. These align with the expected outcomes of the course well. Based on the suggestions of the students, the following changes will be incorporated into the course. (1) Extra examples as homework will be given to the students. (2) Because of the size of the lecture hall and the number of students, some students commented that they sometimes could not hear me well. To ensure that all the students can hear clearly, I will use a sound system to in the classroom.
