

CHE 494 courses: Fall 2019 and Spring 2020 Self-Study Report

Instructor: Sanjay Behura

Course Comments / Plans

Materials for Energy' course: I plan to include more on fundamental science related to semiconductors and applied science related to emerging photovoltaics such as: quantum dot solar cells, perovskite solar cells, dye-sensitized solar cells, and CIGS solar cells. I will also emphasize on building a strong connection between lecture-based concepts and lab-based hands-on activities.

'Graphene and 2D Materials' course: I plan to include more lab works related to materials synthesis and advanced characterization tools. In order to inculcate the idea of collaboration among students, a mini-symposium is also in-plan for this course.
