

(1.) Based upon your experiences as a Chemical Engineering student at UIC, please rate your skills in the following categories, using the following criteria:

(1 = Excellent, 2 = Strong, 3 = Moderate, 4 = Weak, 5 = Poor)

- 1.40 Ability to apply knowledge of mathematics, science and engineering.
- 1.54 Ability to design and conduct experiments, as well as to analyze and interpret data.
- 1.68 Ability to design a system, component, or process to meet desired needs.
- 1.60 Ability to function on multi-disciplinary teams.
- 1.47 Ability to identify, formulate, and solve engineering problems.
- 1.50 Understanding of professional and ethical responsibility.
- 1.46 Ability to communicate effectively.
- 1.71 Broad education necessary to understand the impact of engineering solutions in a global and societal context.
- 1.44 Recognition of the need for, and an ability to engage in life-long learning.
- 2.09 Knowledge of contemporary issues.
- 1.58 Ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.
- 1.73 Overall, do you feel that your undergraduate degree will prepare you for your career?

(2.) Which courses or topics were the most interesting or useful?

CHE 205, 210, 313, 314, 499 (ASPEN), LAB + Senior Design

Thermodynamics, calculus 1-3, differential equations, physic 1, che:205,che:210, unit ops lab 1 and 2, senior design 2

321, 312, 341, 301

Orgo I, and orgo lab, all math courses, Achem, ChE: 201, 210, 301, 313, 321, 341, Senior Design I & II, ChemE lab I & II

I enjoyed the transport classes

transport phenomena, thermodynamics, reactor engineering

Chemical reaction engineering, alternative energy (ChE 494), heat and energy transfer and distillation columns (ChE 313).

Unit operations and process controls.

CHE 205, 210, 301, 311, 312, 321

i found the most interesting and useful was CHE 210

Che 494 with Dr. Said Alhallaj. Che 381 & 382. Che 396 & 397.

Che 494 with Dr. Said Alhallaj. Che 381 & 382. Che 396 & 397.

Senior design lab and reaction kinetic

CHE 321, 312, and 397

312,321,397

I loved 321 - Reactions Engineering. Thermodynamics was the most useful

Unit ops lab was very practical hands on work, analytical chemistry was very interesting.

ChemE 382,397,341

Unit Operations lab Thermodynamics (difficult but definitely useful) Computational Methods (CHE 205)

- Process control

Interesting: Alternative Energy Most Useful: Senior Design

CHE 494 (renewable energies), CHE 313, CHE 312, and CHE 201

CHE 210 kept me in the major, I enjoyed 321 as well.

My favorite courses were unit ops lab, process control, and physical chemistry. I would say unit ops and material & energy balances were the most useful courses.

341, 422, 321

Transport phenomenon, reaction engineering, unit operation Lab, process dynamics and controls, computational methods

CHE 313, CHE 312, CHE 341

transport

Senior Design

I liked 321 and 312, they were probably my two favorite courses. In my opinion, they used a culmination of everything leading up to it and explained the theory behind everyday phenomena. 499 - It was nice to see just what exactly our degree can be used for. Much more broad than I expected.

CHE 210 and Senior Design

Senior Design

I found the gas processing plant design as one of my favourite parts of the overall chemical engineering studying process. I did enjoy all of the presentations given during CHE 499, I really enjoyed the patent advisor career choice one: where the presenting person showed the salaries of engineers and lawyers side by side, I remembered why I chosen to become an engineer.

reactor design and fluid dynamics

210, 301, 311-313, 321, senior design, unit ops

341, Aspen, 301,

ASPEN class with professor Nitsche did an amazing job of tying previous classes together and putting a large amount of previous theory into practice. I was fortunate enough to take 321 with both professor Berry and Meyer and both times the class was highly engaging and the homework was highly beneficial to understanding

the subject. Also as a note, making the notes available online are highly beneficial ChE 210 was also highly motivational and great opener to the major.

I enjoyed learning about reaction kinetics in CHE 321 and heat and mass transfer in CHE 312.

Senior Design and Unit Ops

Aspen course

CHE 381/382 (Zdunek) and CHE 312 (Sharma)

Unit Ops was the most useful I think since we had practice writing technical lab reports and analyzing data. I think a close second was CHE 321 - Reaction engineering.

CHE 311, CHE 321, CHE 210 and CHE 4222

(3.) Which courses or topics were the least interesting or useful?

CHE 312. Not a hit on professor Sharma, he is a brilliant teacher. I just did not like the material.

transport phenomena 2, analytical chemistry, and senior design I

Gen Eds

Pchem classes, Transport I and II

Thermodynamics was the least interesting to me but probably because I couldn't grasp it

organic chemistry II (mostly rote memorization and very little generalized theory/analysis. To be honest I have forgotten most of it).

Physics, and circuit analysis.

none

CHE 201, 313

any courses that were required but were not used in the actual chemical engineering courses, like ECE 210 and organic chemistry

Physical chemistry

Physical chemistry

I don't see any course within the chemical engineering curriculum that is not interesting

CHE 313

ECE 210, CME 260, Che 341

Transport Phenomena II

i felt that process dynamics and control was overly complicated and not particularly pertinent to someone not planning on designing control mechanisms.

N/A

Physical chemistry

- Transport Phenomena

Transport Phenomena

CHE 301

CHE 341, we barely went over using controls or their interface, which i think is way more important than the theory.

I believe the least useful courses were the fine arts, history, and English requirements. I found them torturous. The least interesting courses were also general education requirements.

311, 313

Physical Chemistry

ECE 210,CME 260

Engr 100, ECE 210

I liked all the topics that were covered, so it's hard to say.

ECE 210, Orgo 1 and 2

Process Control/Design

none

process control in its current state

Physical Chemistry

205. P. Chem II and O.Chem II are unnecessary for our degree

I loved learning about controls from my mentor Jerry Palmer during design, but during class process control was not interesting and at times felt meaningless especially after weeks of Laplace. ECE 210 was interesting but I did not see application of it in any other of our classes.

I feel like all the classes were useful , but the least interesting one was momentum transfer in CHE 311.

CHE 205

CME, Orgo

CHE 311 (Liu) and CHE 321 (Meyer); largely a function of method of instruction, though

CHE 313 wasn't that useful and was still largely theoretical and never gave us any real world applications or actual sizing of columns. I struggled a lot with that class and I don't think it was well formatted. CHE 312 had the same problem where it was a lot of microscopic theoretical problems that don't prepare us for industry well.

Instead of learning boundary interfaces we could learn how to size a heat exchanger and how heat transfer in those work. I had to self-teach myself everything this semester when doing sizing and picking out equipment during senior design.

(4.) What courses/topics should we consider deleting or adding to the curriculum?

Please more courses on process control. This is of ever increasing importance as we try to automate tasks to improve safety in the industry. Just add another course as an elective maybe.

Add: mandatory aspen course, another programming course, and a technical writing course Remove: Physical chemistry 2, organic chemistry 2

add technical writing class add another programming class remove physical chemistry 2, organic chemistry 2, organic lab

Delete: Pchem I, we already know all the information in this class but now it's taught by a chemistry professor. I don't see the point taking this class. Pchem II, not sure why we need to know quantum mechanics, never used any of this information. Add applied linear algebra to the curriculum and drop these classes. Bring back catalytic reaction engineering.

Add Aspen

I think that the ASPEN class should be required! It would fit nicely in the final semester, when the course load specified by the curriculum falls just short of full-time.

I would eliminate ECE 210.

Maybe a lab course to go along with 321.

Senior Design I and All of the chemistry classes. USELESS

adding an economics class and getting rid of pchem2, orgo 2, and ECE 210

Delete physical chemistry, add enter perjury or business management courses.

Delete physical chemistry, add enter perjury or business management courses.

None

Add more work with MATLAB and Aspen.

Add Aspen class as a prerequisite before senior design

Process Control (341) should be taken junior year or first semester senior year

NA

N/A

Maybe add a course on plant pricing and/or a business class to help understand monetary values

I would add the CHE 494 renewable energies class to the curriculum. It covers social issues of engineering one gets nowhere else as well as some introduction to design.

I really believe that a most hands-on and practical aspect could be added to the lab. Perhaps even a tour of the compressor room. I am leaving with very little knowledge of unit specs and their effects, such as tray spacing on columns, or any detail about pumps or compressors.

have che205 replace cs109 (I know you want to do this already)

Aspen should be made mandatory

Aspen as a pre-req before senior design one

ECE 210

Delete ENGR 100 & ECE 210. Consider implementing more hands on design experience earlier in the curriculum.

I believe that 341 should be moved up in the curriculum, I don't entirely agree with how it is one of the last classes we take at UIC.

adding an economics course

Add more research

none

an environmental design or safety class

Add a technical writing in exchange for an English class so that students are more familiar with technical writing before getting to senior year and during unit ops it can be a time to hone that skill

P. Chem II and O.Chem II are unnecessary for our degree

reintroduce aspen into 321.

I think ASPEN course CHE 433 should be required as it helps a lot with the senior design project in CHE 397.

Add Engineering/Science Philosophy or History, or Creativity in Engineering

remove all the chemistry classes and add more technology classes

Add a credit hour to CHE 311 and CHE 312, and possibly CHE 313, in order to include an occasional lab component with lab report and get some hands-on visualization of the theory while utilizing the equations in practical applications (like the Mechanical Engineering curriculum does).

Physical chemistry is unnecessary and a time waste in the critical junior/senior year courses. We have CHE 301 that covers basically all of Pchem I and Pchem II isn't useful to us except for a sliver of it on distributions which we also cover in CHE 321.

(5.) Do you have any additional comments or suggestions?

More hands on work!

Do not allow students to continue in the course path with a D Labs are very basic

Transport 1 and 2 were the worst/hardest classes I've ever taken. I don't see a time as an engineer where I'll

have to write down the derivation for an infinite slab. It's all math with no foreseeable practical application. Maybe combine these classes into one, and make aspen a required course, and open up another tech elective spot. Do something about Orgo II, make a version for ChemE's. I really enjoyed the class but I don't think it's really geared towards us. Also, do something about our lab, it's kind of pathetic. It has Circle Campus stickers on the equipment, which means it was purchased before '85 (or around there). Please get new equipment that actually uses a computer or something. Our labs are also extremely basic, I mean one of them is just water going through pipes and another is just evaporation. Our orgo labs were more complex. Also, this entire senior year was a plain administrative disaster. I don't know how this department couldn't get us a senior design professor in time, or somehow did not foresee our class of sixty something students was too big for our lab, or couldn't give us any sort of interesting senior design project. I mean, Professor Bilgin is a very nice lady and seems like she would be a good professor, but she had no idea what she was doing and didn't seem to get a lot of help from anyone. Our senior design project was poorly planned, poorly executed, and it was just embarrassing at EXPO. When they called the title of the first place winner, we didn't know who they were talking about because we all have basically the same title. As for the whole scheduling lab debacle, I don't understand how that happened. This department saw how many people registered in the spring, how is it a surprise then in the fall? Did no one even consider a class of our size probably has to be split in half? Also, how in the world does a department not know who is teaching a class until a week before the semester starts? Finally, I just want to say that this department has horrible chemical hygiene and lab safety. We as students listen to safety presentation after safety presentation and take safety classes on dust explosion and learn that the best design is a safe design. We are assigned to design engineering controls on our senior design project on how to combat haz chemicals and processes. And yet, the labs in this department are atrocious. I mean one of the fume-hoods is made out of cardboard boxes. There are like 25 ancient toxic, flammable, gas cylinders sitting a room waiting to kill a ton of people. And, if that weren't bad enough, there are three bottles of peroxides sitting in a lab waiting to basically explode any day now. The lab inspection reports of this department are the WORST I have seen campus wide, and photographs of certain labs in this department frequently make it into presentations of how to NOT manage a lab. This department has a very poor reputation in this regard. None of the professors seem to care the least bit about lab safety and I guarantee if nothing changes in this departments attitude there will be a very serious accident soon.

Add more hands on. I feel like learning can only go so far without application. More time for the deisg project.

I feel that the senior design project should be one full year long. One semester was a little rushed.

More practical based problems in all courses in order to impress the importance of these subjects to students. Also, the importance of internships is huge and it is decidedly unfair for the more social students to get them and the less social students not. So it would be nice if the department could do some sort of placement, as i am sure that there are no shortage of connections within the department. This may be a bit much to ask, but it would be nice.

1. Make the project 2 semesters instead of one. 2. Let us pick our own project. 3. Let us pick our own groups. I shouldn't have work with people who can't even do a mass balance.

Yes, I feel that we were good in learning theology. I wish there were more hands on opportunities for example mandatory individual research or work on projects in companies.

Yes, I feel that we were good in learning theology. I wish there were more hands on opportunities for example mandatory individual research or work on projects in companies.

over all, i had a great experience at UIC

we should start working on our senior project in the first semester of our senior year

It was a solid 4 years.

N/A

One of the difficulties I had with classes was the perceived applicability of the material we were learning to the real life environment. There was not much development in the type of work that a chemical engineer does until the end of my education so I was not as interested in learning the material as well as I would have in the end. Definitely my own error, but it was hard to muster the enthusiasm for the coursework when I could not see the end use. Engineering 100 itself was also a joke and not very informative of what exactly chemical engineers did so I did not have the best understanding of the major consisted of. A course like CHE 499 would have been nice to have towards the beginning or middle of our education rather than at the last semester.

- Introduce the lab sophomore year

not really

No, just more hands-on, practical experience would be helpful - perhaps some field trips to real chemical plants.

Any specifics for courses I have said in those respective surveys already.

For senior design we should choose our own projects

take away orgo 2 and pchem 2 because the material is not relevant

n/a

I enjoyed this class a lot. It was perfect.

No

Make 341 available after DiffEq and twice a year.

If there were a way to take more core classes instead of general electives that would be greatly beneficial.

I think there should be more demonstration labs in CHE courses, for example I really liked the added lab experiment in CHE 341.

no

I love UIC

More hands-on, practical, industrial applications, demonstrations, and focuses.

CHE 312 and CHE 313 can use overhauls in what they teach. I took a lot of theory away from those two, but when my design group spoke with our mentor it was apparent that there has and still is a disparity between the theoretical vs. application.

(6.) How many years/months did it take for you to complete your B.S. degree in chemical engineering?

4 years

5 years. Technically 3 and a half but I started at a different university as a chemistry major.

4 years

five years

4 years

three years exactly. BUT, I am a transfer student who came into the program with an associate's. I had already taken: general chemistry I; calculus I; and most of my general LAS classes.

4 years

4 years and 1 month

it took 4.5 years

4 years at uic plus 2 years from community college, total of 6 years. I switched from Chem major to ChE.

4 years at uic plus 2 years from community college, total of 6 years. I switched from Chem major to ChE.

2 and a half years

5 years

4.5 years

8 years

4 years

4.5

- Six years

5 years

5.5 years

4.5

From community college to UIC, 6, but I have far more than the required credits.

5 years (whole time spent at UIC; minors in math and Computer Engineering)

3.5 years

4 years and 4 months

4 year undergraduate degree.

4.5 years

6 years

six months to go. I will graduate in December 2015.

4 years

6 years

5 years

5 years, came into chemE after being a pre-physical therapy major

I'm graduating in Fall 2015, so 4.5 years.

4.5 years

2 years at UIC after transferring from a 2 year part-time program at College of DuPage; 4 years total.

It will take me 5.5 years total including my major change and two years at community college.

(7.) Did you work part-time while you were a student? If yes, then approximately how many hours per week?

Yes. 20 hours as a UIC athlete and 5 hours as a swim lessons supervisor.

Yes. 20.

no

yes, 12-20 hours a week all throughout college

Yes. Approximately 20-30 hours a week

no

Yes. I worked off and on. I attempted to work approximately 40 hours a week, but it was very difficult and lead to several job changes.

Yes, my freshman, sophomore, and junior year it was around 20. Senior year 10.

10

yes, 5-10 hours per week

No, I worked full time. 40 hrs plus.

No, I worked full time. 40 hrs plus.

yes, 30 hours

Yes, 10 hours/week

Yes. I worked for the past year and a half with 12 hours a week plus running my own online business.

yes, 35hrs/week

yes 25 hr

Yes, 15-30 hours depending on the year and courseload

Yes, twenty

no

I did for 1.5 years.

yes, two jobs at 30-40 per week total

Yes, about 16 hours per week.

yes. 15-20 hours per week.

Yes, about 16 to 24 hours a week

yes, 20 hours aweek

No

Yes, about 20-25 hours per week.

yes, about 5-10 hours a week

Yes, between 12-22 hours depending on the semester. Usually closer to 18

no

no

No

16 hrs (not every semester)

I did work, approximately 22 hours per week

I didn't work.

yes, 20-30 hrs per week

yea, 12-16 hours

Yes, 10 to 20 hours per week depending on course load

Yes, throughout my whole undergraduate education. Anywhere between 10-30 hours a week depending on the semester.

Yes, +20 hrs.

(8.) On average, how much many hours did you spend on each ChE course outside of class?

Well some courses 5 hours per week and then there were courses like senior design where it was easily 40+ hours a week (some weeks).

6-7 hourse per course per week.

30 hours

5-7

At least 10 hours a week

60+

30 hrs per week.

Cumulative about 24 hours a week.

40-50

about 5 hours a week outside of class each week

Per week about 3, depending on when we had quizzes or exams. Usually the week of an exam, 10 plus hours and b sometimes a few days w/o sleep.

Per week about 3, depending on when we had quizzes or exams. Usually the week of an exam, 10 plus hours and b sometimes a few days w/o sleep.

10-15 hours outside class

4-5 hours per week

10

Maybe 8-10 hours a week.

6hrs/week

6 hr

10 hours/week

All the hours.

50

~20 hours

depends on the class, but around 30-40 hours a week

2 or 3.

A class like CHE210 got 4-7 hours per week. A class like CHE301 got 10-15 hours per week

3-4 hours

7 hours aweek

a lot

40

Maybe around 16-20 hours per week.

20

5 per class

At least 5 hours a week per class. It would be doubled on the harder weeks.

15

A lot

20 hrs/week

Not including senior design, I would say 8-10 hours

around 8-10 hours each week.

10 hours per week per class

15 hours at least

About 10 hours, very dependent on how long it took to understand the material.

I'd say on average maybe 6-8 hours. Some courses I spent a lot longer (Senior Design II = ~20 hours a week).

15-20

(9.) Did you participate in any summer research/internship program at UIC or at other schools? Did you complete an internship at a company? What company? Was this a useful experience? What specifically did you learn that was most useful?

Interned at J.T. Thorpe & Son after junior year summer. This was an incredibly useful experience.

no.

Yes I participated in summer research. It was a very useful experience, I learned about conducting experiments, coding, and analyzing data, all of these will aid me in my future.

I interned for the USEPA

I completed an internship at Environmental intellect, which I received at a UIC AiChE meeting. The experience taught me a lot and put me ahead in my last semester. I particularity was ahead in design

I have been working in both Dr. Sharma and Dr. Wedgewood's labs since May of 2013. I also completed a summer internship with the Illinois EPA office of pollution prevention in 2014. The most useful aspect of these experiences was learning to approach totally original problems and communicate solutions to a non-technical audience.

I did not do research at UIC or elsewhere nor did i manage to get an internship.

I will be interning this upcoming summer at Freeport-McMoran.

I researched for last summer under Dr. Vivek Sharma and Dr. Lewis Wedgewood

i completed two internships, one at Bostik Inc, and one at Amcor Flexibles

Yes, two internships in waste water treatment plant, and research on river rehabilitation with Degree on & FOEME. They b were very interesting and helpful. Working in waste water treatmen, I was introduced to scads and p&id pfd's

Yes, two internships in waste water treatment plant, and research on river rehabilitation with Degree on & FOEME. They b were very interesting and helpful. Working in waste water treatmen, I was introduced to scads and p&id pfd's

no

I did one internship after my freshman year at Nicor Gas.

no

Nope.

No

I did an internship MWRD, it was a very useful experience I learn how to apply and connect both school and the real life

3 internships. Interpersonal/intrapersonal skills at each company were the most useful as we get the least "education" in our engineering classes, especially as group work is not common or required until the last year of our education

Yes, two summers doing research. No internships.

no

I had 2 summer internships (VVF LLC, Nylok) Very useful experience, and they are a great way to get experience and basic industrial knowledge as a ChE.

I had an internship with PQ Corporation in Gurnee, IL. It was useful, because the connections I made helped me land a full-time position straight out of school. It was great to get a sense of industrial atmosphere.

Summer Research- University of Montreal. Fuel Cell Research. Very useful (and Montreal was lots of fun)even if the most important thing I learned was that I do not want to do academic research for a living. Internship- Agrifine Corp. Lab job. Learned how a small plant operates and why niche businesses are needed/profitable. Internship- UOP/Honeywell. Super useful. Learned a lot and lined up a job. I now know I enjoy corporate research (not my current plan, but something I will keep in mind).

Yes, at S&C Electric Company and it was a useful experience.

yes

I interned at Veolia Water Technologies. The experience I had there was extremely beneficial and prepared me well for my senior coursework

I participated in research with Dr. Sharma. I thought it was a wonderful experience and opened me up to how

research is conducted as well as presented.

yes, completed two internships. one with Bostik Inc, and Amcor Flexibles

i did not, and i regret it

no

yes. Interned at the Illinois EPA. This was a useful experience to understand how EPA regulations work and how they determine compliance with a company for environmental safety. The experience with air quality control as well as waste water sitb compliance checks

Research with Dr. Akpa. It was very insightful and I also gained piratical knowledge about data collection and analysis along with molecular modeling

ASCEND - summer 2010

NO

I had an internship at a start-up company called HappiLabs in Spring of 2014, where I did a lot of excel work. In summer 2014 I worked as a research and development intern in Sherwin-Williams, where I did mostly lab work. This summer I'm working as a technology intern at SunCoke energy. All the experiences were/will be useful.

Research at UIC with Dr. Sharma

Research.

I interned at Enbridge Energy Partners in Texas during Summer 2014 after my Junior year. This was the most important experience in my chemical engineering curriculum because everything I learned Junior year was completely abstract until I saw it used outside of UIC in the field by professional engineers. Walking down a processing plant with P&IDs in hand was the most useful introduction to practicing engineer work, and then learning about all the issues related to the plant components put all of the abstract CHE material into practice. This internship was crucial.

I haven't done an engineering internship but I've done research in two different UIC labs, one within the Chemical Engineering department and one outside of it. These were very useful because it gave you a sense of practicality of what is and is not useful that we learn in the research vs. industry battle that undergraduate classes have to choose on what to prepare you for.

N/A

(10.) Have you found a job? If so, in which company and industry? Please indicate your job title or specialization.

No, still searching. Looking for O&G or chemicals as a process/chemical engineer.

Most likely. Air Force as an engineer.

Yes, Ph.D at UCSD

Nope.

Yes, I am choosing between two: the company I mentioned above and UOP.

I am going to graduate school.

I have not found a job, but i am hopeful i will find one in short order.

I have one more semester.

I'm doing a co-op after I graduate at PSRI (Patriculate Solid Research Institute) for 6 months. The work entails designing Olefin crackers and sizing distillation columns.

have not yet

No! This is one thing I feel we were not prepared for and would be nice if the department can pay more attention to this. If department helped me find a job, I would have been able to focus a bit more on my studies. I feel that the career services are not doing a good job in seo.

No! This is one thing I feel we were not prepared for and would be nice if the department can pay more attention to this. If department helped me find a job, I would have been able to focus a bit more on my studies. I feel that the career services are not doing a good job in seo.

no

Still searching.

no

Nope.

No

No

No

No, I haven't found a job.

no

No, still have my last semester, of which has no CHE classes.

Process Engineer with PQ Corporation in Jeffersonville, IN.

Yes. UOP/Honeywell. Process Controls & Instrumentation.

Yes, S&C Electric Company, Chemical Engineer

not yet

no

Yes. Veolia Water Technologies as a Project Engineer.

I have found a job, starting in August I will be working for UOP: A Honeywell Company as an Instrumentation Engineer.

have not found a job yet, have an internship this summer

no

no yet

No

No, I have another semester until graduation

Yes, Westinghouse, Chemical Engineer, Risk Management

NO

I'm graduating in the fall of 2015, so I wasn't looking for a full-time job yet but I did find a summer 2015 internship.

no

not yet

I will be starting as a Design Engineer at EN Engineering, which is an engineering consulting firm focusing on automation and other design work predominantly in the oil & gas industry, but expanding into other fields as well. The company is headquartered in Warrenville, IL, but I will be moving to the San Francisco Bay Area where they have opened a new office in San Ramon.

I have not, I'm graduating in the Fall and will begin applying for full time jobs in July or August.

No.

(11.) Are you planning to attend a graduate or a professional school? If so please list the name of the school and the specific program (M.S./Ph.D/M.D.) that you will enroll in, or those programs that you have looked into.

If I cannot find a job, I am looking into a masters in Project Management.

yes, Ph.D at University California San Diego

Maybe. If I did, I would not study engineering though.

No

I was offered admission (with full funding) to Ph.D. programs in chemical engineering at: University of Chicago, University of Wisconsin - Madison, University of Illinois - Urbana, University of Colorado - Boulder. I will be attending UW - Madison. My thanks to the department for placing me in such high-ranking programs. I will always tout the department as a place where enormous opportunities await those who work hard and get involved.

I was originally going to attempt a masters in chemical engineering at UIC, but my plans changed and I am undecided on when and if i will return to school for a graduate degree.

No, go into industry.

no

not planning on graduate school

As of now yes, b/c I don't know what else I can do. I applied at uic for Mee program. Now having a hard time finding Go or Rd possitions. I can't afford grad school, and don't qualify for a lot of student loans. Would be nice if department can mention to offer assistance to a few student who are us citizens and not from China or elsewhere.

may be

Not immediately.

no

Nope..maybe go get my MBA but not in chemical engineering.

No

No

No

No.

no

No graduate school for me.

no

I struggled through school. I was looking for practical skills more than general education and I never appreciated the system outside of the CHE courses. I believe I have all the calculus I'll need to garner a decent salary, so I will not be back unless something dramatic happens.

Nothing at this point. An MBA is a possibility but is at least 5-10 years out if I even decide to pursue that route.

May be MBA program

no

no

Not currently.

At this time I do not plan for it; however, it is not outside the realm of possibility.

i plan on getting MBA in Future

no

no

No

Not at the moment but maybe in the future.

No

NO

No

M.D. Hopefully UIC in Fall '16

no

I have looked into graduate MS Engineering and MBA programs in the San Francisco Bay Area from every school from Stanford and Berkeley to SFSU and Santa Clara, and I plan on applying for a part-time program after a few years of industry experience.

(12.) Do you have a strategy in mind for continued professional development and/or continue learning? For example, do you intend to take the FE/PE exam at some point in your career? If so, when?

I do, however I have not signed up yet.

Yes, Ph.D

I would like to take the FE sometime in the next year depending on where I get a job.

I intend on taking both exams. The FE here in a few months. PE when applicable. I will continue researching and reading into the industry to stay ahead.

My next step is to research the various projects being undertaken by the UW-Madison faculty, for the purpose of finding a research adviser with whom to work towards my Ph.D. I am interested in either: computation and theory; polymer science; semiconductors; or catalysis. My goal upon graduating is to take a postdoc position, eventually going on to apply for faculty positions (professorships).

I am planning on taking the FE in August and I hope to take the PE as well in a few years. Other than that, I plan on working full time and possibly getting a masters at some point.

I don't plan on taking FE/PE but possibly going to a MBA.

I already took the FE. I will work about 5 years, and then take the PE and GMAT and then go to business school to get my MBA and then stuff.....

i am taking the FE in august, and am considering taking the patent bar, and getting my MBA in the future

I can't afford anything right now. I could b early make money for my daily necessities.

I can't afford anything right now. I could b early make money for my daily necessities.

yes, i'm standing for the FE at the end of this semester

I intend to go into industry for the next couple of years and then go back to grad school to get a master's in business or in a technical capacity.

not now but maybe sometime later

I want to continue running my own business and therefore creating financial freedom. My passion for being a chemical engineer has degraded over the past year because the way the material was presented to me. I have lost interest after junior year because senior classes are extremely impracticable and unrealistic especially our design project. The professors are awesome people and should be recognized for all their hard work.

Not at the moment

yea I will be taking the FE exam ASAP

If I choose to continue as an engineer, I would like to take the FE within a year of completing the degree.

Yes, I intend on taking the FE exam.

I do intend to take those exams, but i might take them over the summer or next year

I do intend to take and pass the FE

I plan to take the FE in august

I intend to take the FE shortly, and the PE when possible. I don't have specific plans for courses later in my career yet, but I will keep reading.

Taking the FE on May 5, 2015. I will continue to be a member if AIChE if I can. I am learning spanish in my free time.

I intend on taking FE/PE at some point during my career.

no

maybe

In intend to take the FE this summer following graduation and continue with the PE when I'm capable.

I intent on taking the FE in August.

yes i am scheduled to take FE this summer and get MBA in future

no

not yet

I am taking the FE in May to gain the PE certification later down the road.

I plan on taking the FE next semester

possibly going back to get Industrial Hygiene certification in 5 or so years. Attending AIChE meetings. Not currently planning on FE/PE.

Yes taking the FE, attending career workshops, recently joined the Young Chemist Community

I'm planning on taking FE exam before graduation in fall 2015 and after I have the required experience I will take the PE exam.

just get a job

I will take the FE immediately after graduation; I will utilize my company's educational assistance plan to consistently take one or two courses related to engineering or general technology (i.e. electronics, software engineering), possibly pursuing a certificate program; and I will eventually look into graduate school.

I'm a lifelong learner and will work on whatever interests me. My grades may be mediocre with only a ~3.0, but I've done a lot of side projects and things on my own outside of class that aren't reflected in that. I chose engineering because I like designing things and bringing things off of paper into the real world. I don't intend to take the PE exam, but I may take the FE exam since I've heard it's not too difficult.
