

(1.) Based upon your experiences as a Chemical Engineering student at UIC, please rate your skills in the following categories, using the following criteria:

(1 = Excellent, 2 = Strong, 3 = Moderate, 4 = Weak, 5 = Poor)

- 1.40 Ability to apply knowledge of mathematics, science and engineering.
- 1.54 Ability to design and conduct experiments, as well as to analyze and interpret data.
- 1.67 Ability to design a system, component, or process to meet desired needs.
- 1.45 Ability to function on multi-disciplinary teams.
- 1.54 Ability to identify, formulate, and solve engineering problems.
- 1.30 Understanding of professional and ethical responsibility.
- 1.40 Ability to communicate effectively.
- 1.44 Broad education necessary to understand the impact of engineering solutions in a global and societal context.
- 1.36 Recognition of the need for, and an ability to engage in life-long learning.
- 1.74 Knowledge of contemporary issues.
- 1.61 Ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.
- 1.75 Overall, do you feel that your undergraduate degree will prepare you for your career?

(2.) Which courses or topics were the most interesting or useful?

Useful: Thermodynamics, Aspen Plus, Transport Phenomena II Interesting: Unit Ops, undergraduate research (Sharma)

341.382

Thermodynamics, Chemical Reaction Engineering, Transport, Senior Design, and CHE lab

Transport Phenomena III (Che-313) Aspen Simulation (Che-433)

Senior Design, ASPEN Elective, 311, 312, 313, Chemical reaction engineering, 301, Process control

Thermodynamics, Material and Energy Balances, Transport Phenomena, Separation Processes and Chemical Process Control.

Entrepreneurship was by far my most useful and interesting course

yes

heat transfer

Senior Design, Unit Operations, and Transport Phenomena 2 and 3 were truly interesting

Throughout my undergraduate career, the most interesting courses from the engineering department were CHE 210, 301, and 313. I think these courses provided the fundamentals of what Chemical Engineering was about. When it comes to Chemistry courses, the most interesting for me were CHEM 232, 233, and 342. These three courses gave me an insight of what Chemical mechanisms are about and helped me reviewed my thermodynamics.

Fluidized bed of solid catalyst was an interesting topic for the lab. All of them that we learned were useful as they had real-life implications in the industry.

Computational methods in chemical engineering, differential equations, transport phenomena I, II, and III. All Dr. Caracotsios courses with his emphasis on industry problems to solve (CHE thermodynamics, Aspen simulation, Process Control)

Renewable Energy, Material and Mass Balance, Senior Design, Senior Lab

Transport Phenomena, Thermodynamics, ASPEN, Design

The distillation column and the mass transfer labs were the most interesting.

Thermodynamics, Transport Phenomena, Unit Operations, and Process Control.

Che 205, Che 396/397, Che 381/382

312,311,313,321,301,205,210,381,382,396,397

Thermodynamics (CHE 301) Process Simulation (CHE 433) Process Control (CHE 341)

ChE 451: Renewable Energy Technologies ChE 201: Material and Energy Balances

Senior design

Senior design first semester (396) was the most inserting and useful.

Mass Transfer

201,210,205. Building blocks of CHE if your strong there. the rest is easy

312

Calculus

The liquid extraction lab was very interesting I think the most relevant to my interest in the specialty chemicals and cosmetics market

Numerical Methods, Transport Phenomena, Process Control, Renewable Energy Technologies.

Senior design and Unit Operations were the most interesting because you are applying theory to things that are in real life instead of just looking at textbook problems

thermodynamic chemical reaction

They are all interrelated, but I would say Senior Design, feeling like I working in the industry already.

CHE 301 Chemical Engineering Thermodynamics

most useful - Computational Methods in Chemical Engineering, Material and Energy Balances, transport phenomena, and thermodynamics most interesting - thermodynamics

I loved renewable energy and technology!

CHE 433, CHE 311-12, CHE 381-382, CHE 396-397

Aspen Simulation, Transport phenomena

301, 341, 312, 381/382 was a lot of fun

Senior Design

Material and Energy Balances (The whole class is very very useful, as well as interesting) Senior Design (I loved how we applied all our knowledge into creating our own project from scratch)

Process Control, Thermodynamics, Senior Design

Transport phenomena II

Unit ops and senior design

CHE311

All CHE courses. All math and chemistry courses, as well as the English research paper writing course

Process Control

Lab courses

CHE 301 and CHE 433

Unit Operations 1 & 2, Thermodynamics & Chemical Reactions

Aspen Plus was both interesting and useful. CHE 201 and 301 were both useful in teaching the fundamentals of Chemical Engineering. All transport phenomena classes were important and useful, as well as Process Control. CHE 205 was also useful in showing what kind of coding would be useful in the field.

312 and 313 were the most useful and interesting classes of the uic curriculum.

Personally, I found CS109 with Hummel and CHE205 with Nitsche were the most useful to me. In my junior year, for whatever reason, I started coding all my assignments and labs and it simply grew from there as an obsession. In that regards, I didn't see the value of those classes then, but I thank my lucky stars today that I had that foundation and knowledge to be able to do what I can now. The most interesting class that I had at UIC was my ASPEN Simulations class. I don't think any other chemical engineering class really forced me to fend for my own and solve the problem as a real engineer more than that class.

Thermodynamics

Aspen, senior design and lab.

CHE 201 CHE 210 CHE 205 CHE 301 CHE 341 CHE 381 and 382 CHE 396 and 397

Covid19 messed up everything

Most definitely the senior design courses and along with process control. Also the unit ops labs as well. Engaging all the things you learned into those courses was very cool stuff.

level 200

(3.) Which courses or topics were the least interesting or useful?

Least useful: physical chemistry II

N/A

Every class is useful, but I have to say that CHE 201, Computational Methods, CHE 210, and Transport 3 were the least interesting

Che-321 The course itself could have been something interesting, however the prof who taught it made the course very miserable. Worse class of my whole curriculum.

CME, CS, ECE

Physical Chemistry 2

PChem

thermo

senior design

N/A

From the Engineering department, the least interesting courses were 311, 312, and 321. When it comes to 311 and 321, I will put the blame on the instructors who taught the courses at the time I took them, since they were not passionate about the subjects and just cared about giving everyone a final grade. For 312, I did have a great professor, but I just did not enjoy the material as much.

None.

All were very interesting and challenging.

321 because of Singh

Physical Chemistry, Chemical Engineering Reactions - because of Singh

The process control lab.

Although I found Physical Chemistry 2 to be very interesting, I feel it doesn't necessarily bring useful concepts to chemical engineering. However, I found ECE 210 to be a more practical topic but not interesting to me at all.

Che 312, Che 321, Chem 346

CHM 260, Che 201, and Chem 346

Physical Chemistry II (CHEM 342) Organic Chemistry II (CHEM 234)

ChE 205: Computational Methods in Chemical Engineering

Computational methods in Chemical engineering

CHE 205. When I took it, I did not find the class useful at all.

na

CHE 321. the material in class was not retained. All of my peers agree. We had a bad semester

205

Transport

I think all were useful

I only took courses I was interested in.

CHE 205

CHE 301

I don't have a particular one, because everything we learned, there is always a way to apply it.

CHE 311 Transport Phenomena I

least useful - physical chemistry II least interesting - Chemical Reaction Engineering

Transports but they could have been better taught

CHE 313

Physical Chemistry II

311, 313

CHE 321 I feel like I did not learn as much as I should have in this course

Transport Phenomena 1 and 2 (I understand the importance of these courses and how they are applied to chemical engineering, but I personally did not find them that interesting)

transport

Properties of Materials, Organic Chemistry

Chem 346 CHE 201

che311

CHE321

Physical chemistry, analytical chemistry, cme 260 are all classes I feel like I learned/applied very little

Quantum Chemistry, PChem 2

CHE 201

physical chemistry

Senior design was the least useful. There was no teaching about the design of the process and the actual design of equipment.

Pchem

The CME course that was required to be taken was the least interesting and least useful.

205 was useless

The least useful classes that I've taken at UIC in my opinion thus far has been my theatre history online gen Ed.

Chemical REaction engineering, I didnt learn anything

ECE 210

Transport phenomena is very important, yet the way/ the environment that we experienced was not very helping

Covid19 messed up everything

In my opinion, 205. I learned in that class but its things that you know before hand. It is good for people who do not know excel. Even the coding in that class, you do not learn much, you have to teach yourself how to code in VBA.

CHE 321

(4.) What courses/topics should we consider deleting or adding to the curriculum?

Add a polymers course! I heard this may already be in the works.

physical chemistry 2 should be deleted and Linear algebra should be added

I think simulation should be added to the curriculum, not as an elective.

PChem II. I really don't see a use of that at all in an engineering career.

N/A

Remove physical chemistry 2 and add a material science course.

Pchem

na

All courses were necessary

I think it would be interesting to add to the curriculum CHEM 314 (Inorganic Chemistry) since this course provides helpful information on how non-conventional solids are used in industry or for environmental issues.

I believe the syllabus as it currently was scheduled was good for the topics!

We need more coding courses. I feel there is a big emphasis on programming with very little background required. I felt extremely underprepared for that.

Pchem 2

Physical Chemistry had a lot of Thermodynamic material

None

Unsure

Chem 346

Delete Che 201, CHM 260, and Chem 346

Physical Chemistry II (CHEM 342) -- Delete Organic Chemistry II (CHEM 234) -- Delete

Additional concentrations besides biochemical engineering

NA

I'm not sure to be honest.

na

none

delete 205

Physical & Analytical Chemistry

Consider adding Linear Algebra to the curriculum.

A course should be required on how to draft emails to employers and a simple email writing and professional class

deleting: Pchem 2 adding bioengineering course more

Nothing in the Engineering Course, but I think most of the Gen Ed like Gender Studies and Feminist Theories needed to go away.

Organic Chemistry 2 (CHEM 234) should be deleted and Linear Algebra should be added in replacement I believe. This is because any organic chemistry that was used in the chemical engineering curriculum was taught in Organic Chemistry 1 and CHEM 234 did not help to add to that in any way. On the other hand, matrices were used very often, however, we have not taken the required courses to support that knowledge which is Linear Algebra(MATH 310).

delete physical chemistry II add linear algebra and financial engineering

Orgo 2, process control (easier version)

I would add another process simulation course, one that covers more subjects like Electrolytes, Solids.

delete Physical Chemistry II add in a chemical engineering related elective instead

N/A

I think there is a class like this already but adding a class dedicated to finances relating to engineering would be interesting.

pchem 2

Please add a course that deals with actual industry-like tasks we may be given. Process control does the best job at this, but there is minimal guidance from professor.

CHE 201 There are many better "starting" engineering courses but not this one please.

I think that since the Aspen class isn't mandatory, students should slowly be exposed to Aspen features starting from Che201. General knowledge of Aspen is extremely helpful in process control and senior design

Removal of Pchem2 and ECE210, instead, incorporating MATH310 since linear algebra is widely used in calculations.

Physical chemistry 2 can be replaced with an aspen situation class in my opinion.

I think you already removed PChem2

The initial thermodynamic course taken in sophomore year. Instead just have pchem 1 there

Delete CHEM 346, and replace CHE201 with something useful.

Make 433 mandatory.

Remove Pchem Add more reaction based courses

CME 260 should be taken into consideration of deleting for the Chemical Engineers at least.

205 and physical chemistry 2

I feel that Linear Algebra would have been a very helpful class in my mathematical solving skill set. An addition I feel would have been helpful is the removal of Organic Chemistry 1 and 2 since its focus is biochem and medicine. But it would be replace

Process control and orgo 2

nothing

CHE 341 is very important; it should be added and maybe consider add transport phenomena as one course instead of three courses

Covid19 messed up everything

Nothing really.

delete:pchem2

(5.) Do you have any additional comments or suggestions?

I was disappointed at our class' CHE321 experience in the Spring 2019 semester. I wish I would've learned more from that class because I know it would've been useful.

NO

I liked the group projects and suggest more to have the students build a network and connect so that they adapt to working in group environments like the real world and are able to apply the theories they have learned to

projects in real world examples.

I think more day-to-day projects should be added to the curriculum, preparing juniors and seniors for the real world outside the classroom.

N/A

More hands on projects.

NA

na

NO

I think Chemical Engineering is a degree that requires knowledge from many areas, so I would consider that 5 years of education would be better since it would let the student take more Chemistry and Chemical Engineering courses to prepare him/her on her Senior Design project.

None.

n/a

A stricter program. Should be 25% less students. Failure should be a possible outcome in courses. Need the appropriate talent to exit ChemE to be able to represent the school and the program well. Some students that have graduated I really am not confident in their knowledge of ChemE or their work ethic.

No

I believe the chemical engineering professors at UIC are incredibly knowledgeable and inspiring people. My experience at UIC has been great and I am proud to receive my chemical engineering degree from UIC.

N/A

Have more DI water for the chemical engineering lab.

N/A

Organize social events to bring students together

NA

No.

na

I think you are already doing this, but make classes more available at other semesters.

no

N/A

No

which class time would be longer, our program is unfriendly to transfer students

We did not learn anything from CHE 321 unfortunately because we lacked a good professor that would give us examples where we could apply our knowledge. The class was 100% theoretical in my opinion and very advanced to the point no one in class understood what was going on. This had severe repercussions later on in Aspen class and in CHE 341(Process Control).

we should have used the next class room next to senior design.

I think certain courses, i.e. CHE 321 and CHE 313 could benefit from other professors running them. I would have loved to be in the CHE 313 class with professor Wedgewood. I also think Dr. C would have taught CHE 321 really well and I would have walked away understanding more.

No

As I mentioned above, we need more industry related tasks that we may be assigned. But we ALSO need a professor to guide us solving these issues every step of the way rather than just assigning high difficulty assignments without any guidance.

My main suggestion is early exposure to Aspen. Maybe an intro to chemical engineering class, similar to what the bioengineering department offers... I think it was BIOE101, after taking that I knew Bioengineering wasn't for me. ChemE students would greatly benefit from a class like that, which basically tells students about the different areas in chemE. In BIOE101, for example, I got to use an arduino and coded for the first time, we also had guest speakers and other hands on projects.

no

Students need a study room in the EIB building.

Dr. Zdunek, Dr. Wedgewood, Dr. Caracotsios, Dr. Bilgin, and Dr. Mahreen are the most outstanding educators and prepared me for the professional field.

Senior design needs to be reworked. And we need more professors that have worked in industry and that just haven't done research.

UIC is a great school!

Thank you for accepting me into the Chemical Engineering program, and thank you for all the knowledge and wisdom from all the professors that will be used in the field.

none

I've really enjoyed my time and education here at UIC. Thank you so very much for teaching me chemical engineering, and letting me learn and grow as a person. I am eternally thankful to the CHE dept. and everyone in it. The professors are amazing and I really feel like I can go out and apply the principles i've learned into practice.

There should be a bigger class area in EIB

CHE 321 professor was the worst of all my classes.

students should be introduced to process control before their last year. It is very important topic in ChemE so maybe consider and intro class for process control Also consider taking students to field trip, visiting refineries and so on

Covid19 messed up everything

No, not really.

no

(6.) How many years/months did it take for you to complete your B.S. degree in chemical engineering?

4 years

total of 4 and half years

4 yrs

4.5 years in total including my associates

about 5

3 Years at UIC 2 Years at community college

4 years

3 years

It took me 4 years to complete my B.S. degree

4 years and 6 months!

3 years once I got to UIC. I took 2 years of courses at community college.

5 years

5 years (Due to some classes being available in one semester)

4.5

6 years.

6 Years

3 years at community college and 3 years at UIC.

5 years

4 years

2 years at community college and 3 years at UIC

4 years at uic.

1.5 years at community college 2.5 years at UIC

5 years

4 years

4 year (8 Semesters)

4 years

five years

In 6 Semester in UIC, mainly scheduling.

4 years.

6 years

5. two years at a junior college and three at UIC

7 year. (3 cc, 4 uic)

5 Years

5 years

4 years - but I came in with AP credits which helped a lot

3 years at UIC. Transfer student

4 Years

5 years

I graduated high school in 2011, attended community college part time while working full time. I transferred to UIC in January 2016. Took the academic year of 2018-2019 off to do a co-op and returned in the fall of 2019. So, from high school graduation until now, I guess it took me a total of 9 years...

5 years

6 years total. 3 years in community college, and 3 yearst at the UIC. I am single parent that works. For some semesters I was a part time student.

5 years

3 years

6 years as a transfer student with 2 at UIC

It took 4 years to complete my B.S. degree in Chemical Engineering.

4 year

7 years

4 years

7 years

Six years total if I include my community college days. Two and a half years at UIC I believe.

5 years

(7.) Did you work part-time while you were a student? If yes, then approximately how many hours per week?

Yes, I worked at a bar about 10-13 hours a week if I worked one day, or 16-30 if I worked a few days. It varied.

yes, 16 hr

yes, 16 hrs/wk

No

yes, 20 hours/week

Yes about 30 hrs

Last semester of senior year yes, 10 hours per week

yes, 10

yes

NO

No, I did not.

I worked full-time as a student with 40 hour work hours per week.

I worked full-time, (40 hours a week)

Yes, 20 hours a week

Yes, about 20hrs a week

Yes, between 30-15 hours per week.

Yes. During my senior year I worked as an undergraduate research assistant for an average of 6 hours per week.

Yes (20-30 hours)

Yes, around 12-16 hours per week.

Yes - 12 hrs/week

I worked some semesters but no more than 6 hours a week.

Yes, 20-hours per week

For the first two years, yes. During that time, 16 hours per week.

yes, 25 hours.

yes, 20

yes, and 25 hours

Yes 20-36

Yes I worked a part time job. I started out working full time (40 hrs) and cut back every semester. My last year I worked 3 days a week.

Yes. ~15 hours

I worked approximately 15 hours a week

yes 3 hours/week

Was working 30+ hours a week as a paralegal for the first 3 semester in UIC.

Only for 1 semester. 20 hours per week approximately.

yes 25 hours per week

yes, 20 hours per week last school year and 5 hours a week this school year.

yes, I worked 25hr+

Yes, 10-20 hours per week depending on the week.

first three years - 20 to 30 hours a week last year - 5 hours a week

Yes. Depends 5-10 hrs

Yes, about 12-16 a week

No

yes 28

Yes, 10 hours/week.

Yes, for a few years I was working 30 hours plus.

yes, 10-20 hours

Yes, around 15 hours per week

yes, 30 hours

No

yes, 21

On and off at around 15 hours

Yes-25hours/week

Yes I did work part-time while I was a student. I worked approximately an average of 30-35 hours per week.

Yes around 8

Yes, during my freshman year and fall of sophomore I worked in a grocery store about 35 hrs a week. Ever since sophomore year spring i've worked for the math dept as an LA tutoring and teaching calculus. This job was maybe 10 hrs a week.

yes, I have had 5 jobs y entire carrier

Yes. 26 hrs average

I am a full time student

I worked full-time 50hrs a week

I did not. Focused primarily on school.

yes 20hrs

(8.) On average, how much many hours did you spend on each ChE course outside of class?

20-30 hours a week.

about 12 hr/ week for each class

15-20 hrs/wk for each course

35 hours a week

countless hours

5 hrs

ALOT it would vary between hard weeks and easy weeks cant really put a number on it as it would vary a lot

30 hrs a week

10 hours a week

Majority of my time outside of class was spent working on the homework and projects of each of the courses.

I spent about 5 to 8 hours on CHE courses outside of class, depending on the course.

I spent around the same I did working in studying and completing assignments for the week.

8 hours a week on each course.

10-15 hours each week per course

10 hrs a week

Around 6 per week, per class.

2.5 hours

About 1 hr/day/class

Honestly a lot of hours.

30 hrs

All of my time was spent on coursework. When I took classes with Professor Caracotsios, I basically had no free time.

about 10 hours a week

For each Che class, probably an average of about 8-10 hours per week outside of class

40 hours

20

30 hours per week

20

4 hrs/ day

40

It depended on the year. Sophomore year - 10/15 hours per week on CHE courses Junior year - 50/60 hours per week on CHE courses Senior year- 20/30 hours per week. More if a process control homework is due that week or not

20-30 hours per week

lost count, the objective is not how many hours, rather than if things gets done correctly.

10 hours per week on average. It depends on the class

10

2 hrs min- 9hrs max

Roughly 30-45 hours depending on the course load. Dr. C's homework would take longer to complete and would be the bulk of the hours.

30 - 40 hours a week (all classes combined)

10-15

About 30 hours a week

5 hours per day (if not more, depending on the difficulty of the class)

40

2 hours per course per day

15-30 hr Depends on the class

3-5 hours

10

5 hours

All my time when I was not in class or at work.

30

15+

All of my time for the most part.

6 hours/week per class

Anywhere between 1-4 hours on each CHE course outside of class.

Too many to count

I spent the majority of my time working and learning CHE.

20hrs

50-60

10 - 12 hr per day

Not enough. I had to work and go to school

At least 2-3 hours per day.

30 hrs a week

(9.) Did you participate in any summer research/internship program at UIC or at other schools? Did you complete an internship at a company? What company? Was this a useful experience? What specifically did you learn that was most useful?

I did not participate in summer research but I participated in research during the fall and spring semester this year. The most useful thing I got from it was an incredible amount of discipline and patience! Also I have a lot of pride for the data I got from my videos of thin film experiments. I can't look at bubbles or beer the same way ever again. Dr. Sharma's enthusiasm for his work really rubs off on his students.

No

I participated in research/internships at UIC. The experiences were useful as I learned a lot, but they did not

pertain to my chosen field of study as much.

I did an internship for an utility company. My job was to mitigate the corrosion in their lines.

Yes, research internship at the University of Pittsburgh

Summer Research Intern at UIC. I learned how to conduct rheology experiments and analyze data using Matlab.

YEs internship at INX and AllCell, working in the real world is very different and interesting

yes

no

Yes, I did an internship at Baxter and at Olympic Petroleum. I felt like the experience gave me an opportunity to see how the actual workforce is like.

Yes, I participated in the summer research program at UIC. I completed the program and I truly enjoyed this experience. This program reinforced my skills in Transport Phenomena, which I considered to be very useful given that I wanted to see how the 311 & 312 courses knowledge could be applied in real life.

Did not have time to do research or internship.

GPIP. I loved this program. I thought it very helpful in understanding how PhD programs work and how experiments are conducted.

n/a

Interned at Handi-foil, and CSL Behring. Learned more about manufacturing engineering, and how to apply my ChemE program to their processes. Learned about other engineering aspects unrelated to ChemE

Yes, three summers of research. Two with WPI (one REU and one internship), one summer with Dr. Sharma's lab, and currently doing research for Dr. Alsberg (UIC Bioengineering). It was useful for building my skills as a researcher and defining my want to attend grad school.

Yes. This was incredibly useful. I have gained insight into the study of rheology, which isn't necessarily taught to undergraduates.

Yes, I had a 2 year internship at Nylok. The experience was extremely useful as I was able to learn and apply much more practical knowledge to my job.

No did participate at internships during summer breaks.

N/A

Yes, I did research during all three summers (UIC, Purdue, industry) and spent a year doing research for the Chem-E car. These experiences were useful because I was able to see the breadth of chemical engineering.

The internship was completed at Kinder Morgan and a lot of useful information was acquired including health and safety regulations, process control, and engineering team work

Unfortunately, no.

na

no

I did an internship at All Cell Technologies

N/A

no

I completed an internship with WEC Energy Group (Peoples Gas), and it was a very useful experience. I learned how to apply my engineering problem solving skills to non-engineering issues.

I did research for around 2 years at UIC I also completed an internship at Lawrence Livermore National Laboratory. The experiences were useful but I have learned that CHE is very broad and some of the experience you obtain may not be useful.

nope

Did a summer internship with Shell Gas and Oil, learn alot about operation and management, was going to get hired after graduation, but the beer virus killed my opportunity.

I did an internship at a oil and gas company and served as production engineer during the summer of my junior year. The company was Schlumberger and it was eye opening because I realized what concepts from university were actually applied in industry.

Summer of 2019 I worked as an intern at Utilities Inc. It was useful because I realized I did not want to work in the water utility industry. However, I did learn a lot about water and wastewater treatment systems, GIS systems, and how to organize and keep track of water utilities.

I did internships at the DOE over the summer and worked at UIC EHSO

I did some research with Dr. Sharma. I could have benefited from picking my own graduate student to work with and having the ability to construct and run the experiment the way I wanted. My opinion wasn't valued.

Yes BP Very Useful Lots of data modeling

I completed an internship. Definitely good to know how to work in a team and be a team player. No one works by themselves in industry

I did Summer research with Professor Sharma. It was interesting and I would've enjoyed continuing it, but his communication skills drove me away.

Yes. South Chicago Packing LLC. It was very useful. I learned how to manage waste created in the plant and developed strategies on how to minimize it.

I took a semester off to do a co-op and then the following summer I did an internship. It was a very useful experience and I recommend everyone does it. I learned how the world functions outside of the classroom and also learned how working in industry is like. Specifically I learned process control, project management, functioning in a team, and coding.

Yes, I completed a co-op with GE Healthcare as an Advanced Manufacturing Engineer in their x-ray generation tubes plant. It was extremely useful because I was introduced to a side of engineering I found out I enjoyed a lot. This led to a full time offer.

no

Research at the UIC, and at the Northwestern. Besides the scientific learning, internship in a company was very useful for learning how large company operates, inter-department communication, meetings. Work-life balance.

Internship at companies. I worked at jensen hughes and wheel inc. The internships were incredibly useful, but very hard to find.

no

Yes, they were useful in learning how to work towards something that isnt just a grade.

Yes-research at UIC & I had an internship (Zachry Group) that got cancelled because of Corona. What I learned the most from both experiences is that team work is SO important to learning, designing and understanding Chem E

I had an internship at a company called U.S. Global Petroleum, and the experience was extremely useful. I learned what tests are performed on the oils used in our engines and what standards the oils had to meet to pass the API test, and the same for Antifreeze. I also learned how they inventoried their product and the business side of buying and selling petroleum.

Yes. NO.

I did undergraduate research my junior year and the fall semester senior year.

DOE livermore lab

NO

I did Summer internship at Saudi Aramco in Saudi Arabia in 2019 it was very useful experience especially before senior year. I was introduced to design a process pilot plant and importance of safety.

No

No.

no

(10.) Have you found a job? If so, in which company and industry? Please indicate your job title or specialization.

No job yet.

No

Nope

N/a

No

Not yet

Yes and no, with all that is going on in the world there is a lot of uncertainty

no

no

Not Yet

I have not.

Yes, Procter & Gamble as a Purchases Manager in the logistics sector.

no

Have not found a job.

No job yet :(

No; attending graduate school instead.

No

Yes, Nylok LLC, Adhesive and resin company (fasteners). Job title: Application/Formulation Engineer (in R&D new product development)

Nope still looking

N/A

No because I am going to grad school

No

No. Some of the companies I have talked to recently have mentioned a hiring freeze due to the pandemic.

na

yes, US Navy Nuclear Engineer

continuing my internship at All Cell Technologies

Pharmaceutical Industry - Production Supervisor

no

No job yet.

No

not yet

As right now, nothing comes up, was getting a job as Process Engineer in Shell Gas and Oil. I might have to switch my focus to Pharmaceutical or

I have not I am considering pursuing a master's degree

No

no

Yes, EHS Amazon

No.

No - because of the coronavirus. Most companies have halted hiring. I was in the process of being hired, but it is now back to square one.

No. COVID-19 got in the way of that

Not yet

water treatment evoqua

No, I am still applying.

Yes. GE Healthcare - Medical Device industry. I'm in a leadership rotational program called Operations Management Leadership Program (OMLP).

no

no

Yes, Capital one as a software engineer

no

No, not yet. Thanks coronavirus.

n/a (still a Junior)- I am obtaining a concentration in BioChem.

I have not found a job as of this moment, but am still applying.

none

I haven't found a job yet.

I have none chemE

NO

not yet :(

The company is called Fuchs, its a metal lubricant company. Job Quality Control Tittle QC Supervisor

Still looking.

yes. Nuclear propulsion officer

(11.) Are you planning to attend a graduate or a professional school? If so please list the name of the school and the specific program (M.S./Ph.D/M.D.) that you will enroll in, or those programs that you have looked into.

No.

No

I hope to get my PhD one day to teach as a professor

No

Ph.D. in Chemical Engineering at University of Pittsburgh

No

NO

no

not sure because of the corona situation

Not right now

Most likely, I will attend graduate school but not right now.

If job pays for it, I will be more than happy to take graduate courses.

no

Not planning on attending grad school.

No

Yes, attending University of Washington for a PhD in Bioengineering.

No

No

I might get an MS in chemical engineering but I want to work for at least 1-year industry.

N/A

Purdue University for Ph.D in chemical engineering

Graduate school as UIC. Masters of Materials Engineering

I am not planning to attend graduate school at the moment.

not at this moment

Maybe later

no

Not at the moment

no

N/A

No

not yet considering

No, few years of dealing with younger people is enough for me.

Yes. UIC chemical engineering is an option. MBA at Depaul or other universities around Chicago-land area.

no

I want to come back but for medicine

No. This may change in the future.

No

Not at the moment

No, I am not planning on that for the time being. After I find a job and gain experience, I will consider it.

No

I'm not sure yet. Maybe an MBA or a masters in engineering management, or a masters in something I find I want to specialize in once I get more industry experience.

yes, UIC Ph.D in Chemistry

no

No

no

No

no

Currently I am not thinking of attending a graduate or a professional school.

Possibly.

I am planning on going to graduate school either in the spring 2021 or in the fall 2021. I want to pursue a Ph.D in chemical engineering. I am looking at UIC & IIT since their applications are available for the spring. And then I am looking at UIUC, Berkley, MIT, and Northwestern for the fall 2021 once those applications open.

Eventually

NO

If accepted I do plan to pursue my MS in Chemical Engineering

Not quite sure to be honest, we will have to see what the future will hold for me.

no

(12.) Do you have a strategy in mind for continued professional development and/or continue learning? For example, do you intend to take the FE/PE exam at some point in your career? If so, when?

I plan to take the FE exam after graduation.

No

I am planning on taking the FE Exam to be on my way to become a professional engineer when I have decided what state I want to settle down in.

I may go back for a MBA in a near future.

Yes, sometimes in 2021

Yes. FE exam over summer 2020.

Possibly FE if it applies to Sales Engineering, which i feel it doesnt help me there

yes

Not yet

I'm planning to take the FE exam soon

Not yet.

I intend to take the FE/PE and CSCP for logistics.

I plan to take the FE exam this year.

I intend to take the FE exam in the near future.

Six Sigma is one way I will continue professional development.

Take as many courses as possible while completing the PhD and attending conferences.

I will mostly be investigating various scientific concepts at my own leisure, since I have always been interested in science in general. I hope to concentrate on studying for the FE exam once I have settled down with a job and stable income.

I plan on taking the FE, as well as considering getting my MBA at some point

Yes, I want to take my FE as soon as I graduate and one day will take the PE exam.

N/A

I plan on taking the FE exam

No

I am planning on taking the FE sometime in the next few months.

not at this moment

I WILL BE CONTINUOUSLY LEARNING AT THE NAVY

NO

MBA if necessary in future

Yes I intend to take the FE/PE and I am preparing for it now

Preping for the FE/PE.

I plan to take the FE once the exam dates are put back into place

yes

If the opportunity present itself with further professional development, my goal right now is taking the FE exam by the end of the year while looking for a new job, at least I will be EIT by the time I get hired. I am not sure when I will take the PE exam, I needed some time work under the belt in the industry to know when, but at least 5 years from now.

No

I might take the FE/PE exam, depending on the direction of my career, and I may return to school for a masters degree in engineering at some point.

I want my FE or PE if i find a ChemE job

I plan on taking both the FE and PE. FE within the next couple months and PE after a couple years of working.

No, still need to land a job first, then I will be able to better set my professional development goals. I do like attending conferences though.

I plan to take the FE exam. Undecided at the moment.

I plan on going back to school to earn my MBA. I also would like to become certified with the Lean Six Sigma Belts.

No.

Yes, 5 years from now

No, I don't intend to take the FE/PE exam. GE Healthcare is very keen in developing their employees and offering continued learning. I'll probably take GE classes offered at MSOE or Marquette, I also want to become a better coder - in Python, specifically.

no

Yes FE/PE exam will start to work on after graduation. Also I will learn more coding.

No fe or pe courses planned. Maybe an MBA after a few years of working

Plan on taking FE exam

I plan to take my FE/PE

FE exam with in the year I graduated.

I plan to take the FE exam. Hopefully within the next year or two.

Yes.

I am planning on taking the FE exam sometime in the summer and then the PE when I meet the requirements.

If my job wants the PE/FE

Yes. FE in the summer

At this point, I am planning to find a job and start working and applying the knowledge learned in school. Working is another to learn and understand, and at this point I personally need that. I am also planning to prepare for FE/PE exam during the summer if I don't get a job soon. Among all of that, I sure want to attend graduate school later in life

Not at the moment

I am planning on it, but right now I am looking for a job and help support my family.

no
