

Biochemical Engineering Final Project Due on May 5 5:00pm

1. Write a 5-page literature review (A4 paper, < 1-inch margin, single space, < size 12 font for Times New Roman) on the current development of vaccine to virus infection, including the types of vaccine, delivery methods, production method, trend, advantages and disadvantages of each approach and challenges.
2. Write a 3-page proposal to develop a vaccine for COVID-19 based on your literature review. You need to justify your decisions. The proposal should include but not limited to the experimental design of R&D, preclinical study, clinical studies, process for FDA approval, production/purification methods, biosafety for research, and price and market analysis.
